IFA and IBC unveil new trend for broadcasting industry: HBB - Hybrid Broadcast Broadband

This year's IFA and IBC clearly outlined the broadcasting industry's new trend for the next decade: seamless entertainment experience of broadcast and broadband services on a single TV screen. Leading European broadcasters have shown their prototypes and are now busily announcing official 2009 start dates for their HBB platforms. [More>](#)

AAPT ready for NBN

The Australian telecommunications market is set to undergo structural change as a result of the Government's reforms which will see the separation of Telstra's wholesale and network operations from the rest of the company. This is seen as a key aspect and pre-condition of the rollout of Australia's National Broadband Network. [More>](#)

Convergent billing: Criteria, best practice and future trends

Norbert Hohegger, Technology Architect at Infonova published an article in the "Journal of Telecommunications Management" discussing expectations, problems and falsities related with convergent billing. [More>](#)

New Software Assets available in the Infonova portfolio

Infonova launched two new software assets complementing the existing product portfolio - the Infonova Device Configuration Manager and the Infonova MPLS Integration Framework to automatically fulfill MPLS VPN services and customer device configuration. [More>](#)
